***Election/Restrictions***

Applicant's election with traverse of a formula (I) Example No. II-5 in the reply filed on 08/15/07 is acknowledged. The traversal is on the ground(s) that restriction requirement was in error. This is found to be persuasive.

***Specification***

The disclosure is objected to because it contains an embedded hyperlink and/or other form of browser-executable code. Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear what the term "increasing the resistance of plants to the phytotoxicity of other crop protection products" means. The present invention relates to a method of using safeners having formula I. Safeners are known to metabolize herbicides and protect crops. However, it is unclear how resistance of the plants to phytotoxicity is increased.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-6 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3 of copending Application No. 10/257874 and in view of Heinemann et al. (WO 97/27189).

Copending Application 10/257874 contains a method of inducing virus resistance of plants, whereas the present applicant claims a method of increasing resistance of plants to the phytotoxicity of other crop protection products. The action of the method is inherently taught, because both applications pertain to improved resistance of the plant. The fact that one form of resistance is for viruses and the other phytotoxicity does not make them patentably distinct because both methods are used on plants. Formula I, II and III of the claimed invention is within the scope of claims 1-3 of copending application '874'. All limitations of A,  $X_m$  and Q are disclosed in copending application '874' except for the limitation that Q may have structure Q1. Thus, there is substantial overlap between the claims of the present invention and the claims of the "874" application. The instantly claimed method of use would therefore have been obvious to one of ordinary skill at the time of the invention.

This is a provisional obviousness-type double patenting rejection.
